Fujitsu's New Halcyon Wi-Fi Tool

Fujitsu has introduced a new Wi-Fi solution for its Halcyon line. This Wi-Fi tool allows installers to operate a Fujitsu Halcyon mini split system from anywhere with a smartphone, laptop or tablet.

Mini-splits are controlled from a webpage or by using an iOS or Android App. A cloud server manages the entire process.

Homeowners/users receive many advantages. Many mini-split functions can be remotely operated. These include: on/off, change or set temperature, set schedules, timers, and change modes (heat, cool, dry, auto, fan) – all through a simple intuitive application or web browser.

Fujitsu has done an extensive amount of research on wireless options, leading them to this unique offering. The manufacturer partnered with IntesisHome to provide a user-friendly, cost effective solution to accessing Fujitsu Halcyon mini-splits remotely.

For more information, go to www.fujitsugeneral.com or call your local distributor.
