## **Fujitsu Introduces New Heat Pump Models**

Fujitsu General America Inc. is introducing wall mounted 18, 24, 30 and 36,000 BTU/h heat pump systems. Systems 18RLB, 24RLB, 30RLXB, and 36 RLXB are single-zone ductless heat pumps, availing year-round comfort with up to 19.0 SEER and 10.6 HSPF energy efficiency.

High performance fan blades, condensers and evaporators combine with variable speed inverter-driven compressors for reliable, quiet, energy-efficient performance. Variable speed compressors automatically adjust to fluctuating room capacity requirements. A lock-out feature is included, which is set by the contractor to prevent either cooling or heating operation from occurring (this is not a function that can be activated by a tenant, user, or home owner).

Designed for single rooms, these systems are the perfect solution for any space that needs heating or cooling. All systems in this series include Fujitsu's long-life Ion deodorizing filter and a wireless remote controller.
