FUJITSU GENERAL LIMITED
SAFETY PRECAUTIONS

- Before using the appliance, read these “SAFETY PRECAUTIONS” thoroughly and operate in the correct way.
- The instructions in this section all relate to safety; be sure to maintain safe operating conditions.
- “CAUTION” and “WARNING” have the following meanings in these instructions:

<table>
<thead>
<tr>
<th>WARNING</th>
<th>This mark indicates procedures which, if improperly performed, might lead to the death or serious injury of the user.</th>
</tr>
</thead>
<tbody>
<tr>
<td>CAUTION</td>
<td>This mark indicates procedures which, if improperly performed, might possibly result in personal harm to the user, or damage to property.</td>
</tr>
</tbody>
</table>

Safety Symbols

⚠️ The triangular symbol indicates WARNING, CAUTION and DANGER items.

🚫 This symbol indicates prohibited operations. The prohibited action is indicated both within the symbol, and in nearby explanations.

🔥 This symbol indicates instructions regarding operations which are to be performed by the user.

**WARNING**

Do not attempt to install this air conditioner by yourself.
- Consult authorized service personnel for all installations.

Consult authorized service personnel for any repairs.
- Do not attempt to remove parts, or service the unit yourself, since you may be exposed to dangerous electrical shock. This appliance contains no user-serviceable parts.

When moving, consult authorized service personnel for disconnection and installation of the unit.
# PRECAUTIONS

## WARNING

Do not stay in direct cooling airflow for long periods.
- Excessive direct exposure to chilled air could be bad for your health.
- Be especially careful when going to bed, and in rooms where infants, aged, or sick people are staying.

Do not insert fingers or objects into the outlet port or intake grilles.
- A fan operates at high speed inside the unit, and personal injury could result.
- Be particularly careful regarding small children.

In the event of a malfunction (burning smell, etc.), immediately stop operation, disconnect the power, and consult authorized service personnel.
- Continuing to operate the unit under such conditions could lead to hazard of fire or electrical shock.

## CAUTION

<table>
<thead>
<tr>
<th>Be careful to provide adequate ventilation particularly when using the unit in combination with other heating apparatus.</th>
<th>Do not place animals or plants in the direct path of the air flow.</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Insufficient ventilation could lead to oxygen starvation.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Do not climb on, or place objects on, the air conditioner.</th>
<th>Do not direct air flow at fireplaces or heating apparatuses.</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Personal injury could result from a falling object, or if the unit tips over.</td>
<td>• Direct air blowing on fires could result in improper combustion or fire.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Do not hang on or cover the air conditioner.</th>
<th>Do not set flower vases or water containers on top of air conditioners.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Water leaking inside the unit could damage electrical insulation, leading to danger of electrical shock.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Do not expose the air conditioner directly to water.</th>
<th>Do not operate the air conditioner with wet hands.</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Electrical insulation could be damaged, resulting in electrical shock.</td>
<td>• Electrical shock could result.</td>
</tr>
</tbody>
</table>
## PRECAUTIONS

<table>
<thead>
<tr>
<th>CAUTION</th>
<th>Additional Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>Turn off power source when not using the unit for extended periods.</td>
<td>Always turn off power whenever cleaning the air conditioner or changing the air filter.</td>
</tr>
<tr>
<td></td>
<td>● A fan operates at high speed inside the unit, and personal injury could result.</td>
</tr>
<tr>
<td>Take precautions to prevent infants from accidentally swallowing batteries.</td>
<td>Check the condition of the installation for damage.</td>
</tr>
<tr>
<td></td>
<td>● After lengthy use, arrange for visit by authorized service personnel to check installation condition.</td>
</tr>
<tr>
<td>Do not drink the water drained from the air conditioner.</td>
<td>Do not use in applications involving the storage of foods, plants or animals, precision equipment, or art works.</td>
</tr>
<tr>
<td></td>
<td>● The quality of the stored items may deteriorate.</td>
</tr>
<tr>
<td>Take out the batteries from the remote control unit when not using for a long time.</td>
<td>Do not touch the heat exchanger radiator fins.</td>
</tr>
<tr>
<td></td>
<td>● Take out the batteries to prevent troubles caused by battery liquid leakage.</td>
</tr>
<tr>
<td></td>
<td>● If leaking battery fluid comes in contact with your skin, eyes, or mouth, immediately wash with copious amounts of water, and consult your physician.</td>
</tr>
<tr>
<td>Always operate with the air filter installed.</td>
<td>Do not block or cover the intake grille and outlet port.</td>
</tr>
<tr>
<td></td>
<td>● Operating the unit without the air filter could cause excessive dirt to collect on internal parts, leading to malfunction.</td>
</tr>
<tr>
<td>Install the indoor unit and remote control unit at least one meter from any television sets or radio.</td>
<td>Avoid installing the air conditioner near a fireplace or other heating apparatus.</td>
</tr>
<tr>
<td></td>
<td>● Signal radiation could be induced into the system to give erroneous operation.</td>
</tr>
<tr>
<td>When installing the indoor unit and outdoor unit, take precautions to prevent access by infants.</td>
<td>Be sure to attach the intake grille securely.</td>
</tr>
<tr>
<td></td>
<td>● Unexpected accidents could occur.</td>
</tr>
<tr>
<td>Do not use inflammable gases near the air conditioner.</td>
<td>Connection valves become hot during Heating; handle with care.</td>
</tr>
<tr>
<td></td>
<td>● Touching the connection valves could result in burns.</td>
</tr>
</tbody>
</table>
**FEATURES AND FUNCTIONS**

**AUTOMATIC OPERATION**
Merely press the START/STOP button, and the unit will begin automatic operation in either the Heating, Cooling, Dry, or Monitor modes as appropriate, in accordance with the thermostat setting and the actual temperature of the room.

**SLEEP TIMER**
When the SLEEP timer button is pressed during heating mode, the air conditioner's thermostat setting is gradually lowered during the period of operation; during cooling mode, the thermostat setting is gradually raised during the period of operation. When the set time is reached, the unit automatically turns off.

**WIRELESS REMOTE CONTROL UNIT**
The WIRELESS REMOTE CONTROL UNIT allows convenient control of air conditioner operation.

**SWING OPERATION**
The Air Flow Direction Louvers swings automatically up and down so that the air speeds to every nook and corner of your room.

**REMOVABLE INTAKE GRILLE**
The indoor unit's INTAKE GRILLE can be removed for easy cleaning and maintenance.

**MILDEW-RESISTANT FILTER**
The AIR FILTER has been treated to resist mildew growth, thus allowing cleaner use and easier care.

**SUPER QUIET OPERATION**
When the FAN CONTROL button is used to select QUIET, the unit begins super-quiet operation; the indoor unit's airflow is reduced for quieter operation.

**POWER DIFFUSER**
*(for warm air to your feet)*
When the Air Flow Direction Louvers are moved for downward blowing, the Power Diffuser opens in downward direction and generates a powerful air flow to warm your feet quickly and efficiently.

PREPARATION

Turn on the Power

In the case of a direct line connection, turn on the circuit breaker.

Load Batteries (AAA x 2)

1 Press and slide the battery compartment lid on the reverse side to open it.
Slide in the direction of the arrow while pressing the mark.

2 Insert batteries.
Be sure to align the battery polarities (••) correctly.

3 Close the battery compartment lid.

Set the Current Time

1 Press the TIME ADJUST button (Fig. 7 29).
Use the tip of a ball-point pen or other small object to press the button.

2 Use the / / SET TEMP. SET TIME buttons (Fig. 6 22) to adjust the clock to the current time.
button: Press to advance the time.
button: Press to reverse the time.

(Each time the buttons are pressed, the time will be advanced/reversed in one-minute steps; hold the buttons depressed to change the time quickly in ten-minute steps).

3 Press the TIME ADJUST button again.
This completes the time setting and starts the clock.

To Use the Remote Control Unit

- The Remote Control Unit must be pointed at signal receiver (Fig. 1 3) to operate correctly.
- Operating Range: About 7 meters.
- When a signal is properly received by the air conditioner, a beep be heard.
- If no beep is heard, press the Remote Control Unit button again.

Remote Control Unit Holder

1 Mount the Holder.
2 Set the Remote Control Unit.
3 To remove the Remote Control Unit.

CAUTION!
- Take care to prevent infants from accidentally swallowing batteries.
- When not using the remote control unit for an extended period, remove the batteries to avoid possible leakage and damage to the unit.
- If leaking battery fluid comes in contact with your skin, eyes, or mouth, immediately wash with copious amounts of water, and consult your physician.
- Dead batteries should be removed quickly and disposed of properly, either by placing in a public battery collection receptacle, or by returning to appropriate authority.
- Do not attempt to recharge dry batteries.

Never mix new and used batteries, or batteries of different types. Batteries should last about one year under normal use. If the remote control unit’s operating range becomes appreciably reduced, replace the batteries and press the ACL button (Fig. 7 39) with the tip of a ballpoint pen or other small object.
OPERATION

To Select Mode Operation

1 Press the START/STOP button (Fig. 6). The Indoor Unit's OPERATION Indicator Lamp (red) (Fig. 3) will light. The air conditioner will start operation.

2 Press the MASTER CONTROL button (Fig. 6) to select the desired mode. Each time the button is pressed, the mode will change in the following order.

AUTO → COOL → DRY → HEAT → FAN

About three seconds later, the entire display will reappear.

To Set the Thermostat

Press the TEMPERATURE set button.

• button: Press to increase the thermostat setting.
• button: Press to lower the thermostat setting.

Thermostat setting range:

Heating: 60°F to 88°F
Cooling/Drying: 64°F to 88°F

About three seconds later, the entire display will reappear.

NOTE:

• The thermostat setting should be considered a standard value, and may differ somewhat from the actual room temperature.
• During Fan mode, set the unit to “– –” for continuous fan operation regardless of room temperature.

The thermostat setting should be considered a standard value, and may differ somewhat from the actual room temperature.

To Set the Fan Speed

Press the FAN CONTROL button (Fig. 6). Each time the button is pressed, the fan speed changes in the following order:

AUTO → HIGH → MED → LOW → QUIET

About three seconds later, the entire display will reappear.

When set to AUTO:

Heating: Fan operates so as to optimally circulate warmed air.
However, the fan will operate at very low speed when the temperature of the air issued from the indoor unit is low.

Cooling: As the room temperature approaches that of the thermostat setting, the fan speed becomes slower.

Fan: The fan alternately turns on and off; when on, the fan runs at the low fan speed.

The fan will operate at very low setting during Monitor operation and at the start of the Heating mode.

When set to QUIET:

SUPER QUIET operation begins. The indoor unit's airflow will be reduced for quieter operation.

SUPER QUIET operation cannot be used during Dry mode. (The same is true when Dry mode is selected during AUTO mode operation.)

During SUPER QUIET operation, Heating and Cooling performance will be reduced somewhat.
**OPERATION**

**To Select Automatic Operation**

Press the MASTER CONTROL button to select AUTO.

The operating mode “AUTO” will appear alone in the display. The transmit indicator will flash to indicate the command has been sent, and about three seconds later the entire display panel will reappear.

**To Set the Thermostat**

Press the TEMPERATURE set button.

<table>
<thead>
<tr>
<th>LOW</th>
<th>HIGH</th>
<th>LOW</th>
<th>HIGH</th>
<th>LOW</th>
<th>HIGH</th>
<th>LOW</th>
<th>HIGH</th>
</tr>
</thead>
<tbody>
<tr>
<td>When set to 4°F lower</td>
<td>When set to 2°F lower</td>
<td>When set to “normal”</td>
<td>When set to 2°F higher</td>
<td>When set to 4°F higher</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

About three seconds later, the entire display will reappear.

**NOTE:** The thermostat setting should be considered a standard value, and may differ somewhat from the actual room temperature.

**To Stop Operation**

Press the START/STOP button.

The OPERATION indicator lamp (red) (Fig. 3 5) will go out.

**About Mode Operation**

**AUTO:** Depending on the room temperature at the time operation begins, the operating mode will be switched automatically as shown in the accompanying table. Also, depending on the operating mode, the room temperature setting will cause the “standard” temperature to be set as shown.

<table>
<thead>
<tr>
<th>Actual Room Temperature</th>
<th>Operating Mode</th>
<th>Thermostat Setting (<em>normal</em> setting)</th>
</tr>
</thead>
<tbody>
<tr>
<td>88°F or above</td>
<td>Cooling</td>
<td>82°F</td>
</tr>
<tr>
<td>82°F-88°F</td>
<td>Cooling</td>
<td>80°F</td>
</tr>
<tr>
<td>76°F-82°F</td>
<td>Dry</td>
<td>76°F</td>
</tr>
<tr>
<td>72°F-76°F</td>
<td>Monitor</td>
<td></td>
</tr>
<tr>
<td>Below 72°F</td>
<td>Heating</td>
<td>74°F</td>
</tr>
</tbody>
</table>

The operating mode and standard thermostat settings are selected automatically when operation begins.

- When automatic operation is initiated, the fan will run at very low speed for about one minute while the unit detects and selects the proper operating mode.
- Once the operating mode has been set, the mode will not change even if the room temperature changes. However, during the monitor operation mode, if the room temperature changes to below 72°F, the mode will automatically switch to Switch, and when it rises above 75°F the mode will automatically switch to Dry.
- When in the monitor mode, the fan will operate very slowly.
- If the START/STOP button is pressed to recommence operation within two hours after stopping automatic operation, the unit will begin operating from the same mode as before.

**Heating:**

- Use to warm your room.
- When Heating mode is selected, the air conditioner will operate at very low fan speed for about 3 to 5 minutes, after which it will switch to the selected fan setting. This period of time is provided to allow the indoor unit to warm up before begin full operation.
- When the room temperature is very low, frost may form on the outside unit, and its performance may be reduced. In order to remove such frost, the unit will automatically enter the defrost cycle from time to time. During Automatic Defrosting operation, the OPERATION indicator Lamp (red) will flash, and the heat operation will be interrupted.

**Cooling:**

- Use to cool your room.
- Use for gently cooling while dehumidifying your room.
- You cannot heat the room during Dry mode.
- During Dry mode, the unit will operate at low speed; in order to adjust room humidity, the indoor unit’s fan may stop from time to time. Also, the fan may operate at very low speed, when detecting room humidity.
- The fan speed cannot be changed manually when Dry mode has been selected.

**Dry:**

- Use to circulate the air throughout your room.
To Cancel the Timer
Use the TIMER button to select “TIMER RESET.”
The air conditioner will return to normal operation.

To Change the Timer Setting
Perform steps 2 and 3.

To Stop Air Conditioner Operation while the Timer is Operating
Press the START/STOP button.

To Change Operating Conditions
If you wish to change operating conditions (Mode, Fan Speed, Thermostat Setting), after making the timer setting wait until the entire display reappears, then press the appropriate buttons to change the operating condition desired.

About the Program timer
- The PROGRAM timer allows you to integrate OFF timer and ON timer operations in a single sequence. The sequence can involve one transition from OFF timer to ON timer, or from ON timer to OFF timer, within a twenty-four hour period.
- The first timer function to operate will be the one set nearest to the current time. The order of operation is indicated by the arrow in the Remote Control Unit’s display (OFF → ON, or OFF ← ON).
- One example of Program timer use might be to have the air conditioner automatically stop (OFF timer) after you go to sleep, then start (ON timer) automatically in the morning before you arise.
SLEEP TIMER OPERATION

Unlike other timer functions, the SLEEP timer is used to set the length of time until air conditioner operation is stopped.

To Use the SLEEP Timer

While the air conditioner is operating or stopped, press the SLEEP button (Fig. 6).

The indoor unit's OPERATION Indicator Lamp (red) (Fig 3.) lights and the TIMER Indicator Lamp (green) (Fig 3.) light.

To Change the Timer Setting

Press the SLEEP button (Fig 6.) once again and set the time using the SET TIME buttons (Fig 6.).

Set the time while the Timer Mode Display is flashing (the flashing will continue about five seconds).

button: Press to advance the time.
button: Press to reverse the time.

About five seconds later, the entire display will reappear.

To Cancel the Timer:
Use the TIMER button to select “TIMER RESET”.
The air conditioner will return to normal operation.

To Stop the Air Conditioner During Timer Operation:
Press the START/STOP button.

About the SLEEP Timer

To prevent excessive warming or cooling during sleep, the SLEEP timer function automatically modifies the thermostat setting in accordance with the time setting. When the set time has elapsed, the air conditioner completely stops.

During Heating operation:
When the SLEEP timer is set, the thermostat setting is automatically lowered 2°F every thirty minutes. When the thermostat has been lowered a total of 8°F, the thermostat setting at that time is maintained until the set time has elapsed, at which time the air conditioner automatically turns off.

During Cooling/Dry operation:
When the SLEEP timer is set, the thermostat setting is automatically raised 2°F every sixty minutes. When the thermostat has been raised a total of 4°F, the thermostat setting at that time is maintained until the set time has elapsed, at which time the air conditioner automatically turns off.
ADJUSTING THE DIRECTION OF AIR CIRCULATION

Vertical (up-down) direction of airflow is adjusted by pressing the Remote Control Unit’s AIR FLOW DIRECTION button. Horizontal (right-left) airflow direction is adjusted manually, by moving the Air Flow Direction Louvers. Whenever making horizontal airflow adjustments, start air conditioner operation and be sure that the vertical air direction louvers are stopped.

**Vertical Air Direction Adjustment**

Press the AIR FLOW DIRECTION button (Fig. 6). Each time the button is pressed, the air direction range will change as follows:

<table>
<thead>
<tr>
<th>Cooling/Dry mode</th>
<th>Heating mode</th>
<th>Fan mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>① → ② → ③ → ④</td>
<td>④ → ⑤ → ⑥ → ⑦</td>
<td>③ → ② → ① → ⑦ → ⑥ → ⑤ → ④</td>
</tr>
</tbody>
</table>

- Use the air direction adjustments within the ranges shown above.
- The vertical airflow direction is set automatically as shown, in accordance with the type of operation selected.
  - During Cooling/Dry mode: Horizontal flow ①
  - During Heating mode: Downward flow ⑥
- If you wish to select a different airflow direction, you may use the remote control unit’s AIR FLOW DIRECTION button to choose a different setting.
- When the temperature of the air being blown out is low at the start of heating operation or during defrosting, the airflow direction temporarily becomes ⑦ to prevent cold air being blown onto the body.
- When the AIR FLOW DIRECTION button of the remote control unit is pressed, some time is required until the airflow direction louvers reach the desired position. During this time, adjustment of the airflow direction is not possible even when the AIR FLOW DIRECTION button is pressed.

**NOTE**

During the cooling mode operation, you can select the air direction ①, ②, ③, or ⑥ (downward) by pressing the AIR FLOW DIRECTION button.
- Use the air direction ⑥ when you want to cool yourself for a while after taking a bath or shower, or after coming back home in summer months.
- But, for prevention of condensation on the louver, the air direction ⑥ is automatically released after 30 minutes and turned to the air direction ③.

**Right-Left Adjustment**

Adjust the Right-Left Louvers

- Move the Right-Left Louvers to adjust air flow in the direction you prefer.

**CAUTION**

- Never place fingers or foreign objects inside the outlet ports, since the internal fan operates at high speed and could cause personal injury.
- Always use the remote control unit’s AIR FLOW DIRECTION button to adjust the vertical airflow louvers. Attempting to move them manually could result in improper operation; in this case, stop operation and restart. The louvers should begin to operate properly again.
- When used in a room with infants, children, elderly or sick persons, the air direction and room temperature should be considered carefully when making settings.
- Always operate the Air Flow Direction Louvers and the Power Diffuser with the air flow direction buttons on the remote control. Forcible movement by hand can cause incorrect operation. In such a case, stop the operation to let the unit return to normal condition.
- Do not set the Air Flow Direction Louvers and the Power Diffuser for a long time to the heating mode ⑦ during cooling or drying operation. This can cause condensation at the discharge opening and dripping of water. (When operation is continued for 30 minutes or more in the heating mode ⑦, automatic return will be made to the direction ⑧.)
To Select SWING Operation

Press the SWING LOUVER button (Fig. 6). The SWING Indicator Lamp (orange) (Fig. 3) will light. In this mode, the Air Flow Direction Louvers will swing automatically to direct the airflow both up and down.

To Stop SWING Operation

Press the SWING LOUVER button (Fig. 6) once again. The SWING Indicator Lamp (orange) (Fig. 3) will go out. Airflow direction will return to the setting before swing was begun.

About Swing Operation

- The SWING range is as follows:

<table>
<thead>
<tr>
<th>Mode</th>
<th>Swing Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cooling/Dry</td>
<td>1 ⇔ 3, (4 ⇔ 7) (\text{NOTE})</td>
</tr>
<tr>
<td>Heating</td>
<td>4 ⇔ 7</td>
</tr>
</tbody>
</table>

- The SWING operation may stop temporarily when the air conditioner’s fan is not operating or when operating at very low speeds.
- The airflow direction can not be adjusted during SWING operation even when the AIR FLOW DIRECTION button is pressed.

## MANUAL AUTO OPERATION

Use the MANUAL AUTO operation in the event the Remote Control Unit is lost or otherwise unavailable.

How To Use the Main Unit Controls

Press the MANUAL AUTO button (Fig. 2) on the main unit control panel.
To stop operation, press the MANUAL AUTO button once again.
(Controls are located inside the Intake Grille)

- When the air conditioner is operated with the controls on the Main Unit, it will operate under the same mode as the AUTO mode selected on the Remote Control Unit (see page 8).
- The fan speed selected will be "AUTO" and the thermostat setting will be standard.
CLEANING AND CARE

**WARNING**
Before cleaning the unit, be sure to stop the unit and disconnect the power.
1. Disconnect the power.
2. Turn off the electrical breaker.
   - A fan operates at high speed inside the unit, and personal injury could result.

When cleaning the air conditioner, turn off the electrical breaker.

Never use water that is hotter than 100°F. The body may warp or change color.

The unit can be damaged by gasoline, benzine, thinners, insecticides and other chemical agents.

Do not use inflammable sprays such as lacquer or hair spray near the air conditioner.

Cleaning the Indoor Unit
Clean the indoor unit by wiping with a cloth dipped in cool or warm water, then wipe with another soft, clean, dry cloth.

When Not Using the Unit for Extended Periods (One Month or More)
Operate the unit on fan mode for about one-half day on a day with clear weather, to assure that the internal parts are dry (see page 7).

**CAUTION**
When not using the unit for extended periods, disconnect the power for safety.

Inspections and Repairs
Depending on the conditions of use, the internal parts of an air conditioner will become dirty after about two or three seasons of use, and performance may be affected. For this reason, regular professional maintenance is recommended. Consult authorized service personnel.
**Cleaning the Intake Grille**

1. **Open the Intake Grille.**
   ① Place your fingers at both lower ends of the grille panel, and lift forward; if the grille seems to catch partway through its movement, continue lifting upward to remove.
   ② Pull past the intermediate catch and open the Intake Grille wide so that it becomes horizontal.

![Intake Grille](image)

2. **Unlock the Intake Grille.**
   Hold the Intake Grille with one hand and pull the Knobs on the right and the left all the way to unlock the Intake Grille.

![Intake Grille](image)

3. **Clean with water.**
   Remove dust with a vacuum cleaner: wipe the unit with warm water, then dry with a clean, soft cloth.

![Intake Grille](image)

4. **Set the mounting shaft of the Intake Grille into the bearings at the top of the panel.**
   ① Pull the Knobs all the way.
   ② Hold the grille horizontal and set the left and right mounting shafts into the bearings at the top of the panel.

![Intake Grille](image)

5. **Lock the Intake Grille.**
   Hold the Intake Grille with one hand and push the Knobs on the right and the left all the way in to lock the Intake Grille mounting shafts.

![Intake Grille](image)

6. **Close the Intake Grille.**
   Push the lower edge of the Intake Grille at both ends and at the center to close it.

![Intake Grille](image)

---

**CAUTION**

Do not operate with open Intake Grille, as this can cause accidents.
**CLEANING AND CARE**

### Cleaning the Air Filter

1. **Open the Intake Grille, and remove the Air Filter.**
   - Lift up the air filter’s handle, disconnect the two lower tabs and pull out.

   ![Air filter handle](image)

   ![Hooks (two places)](image)

2. **Remove dust with a vacuum cleaner or by washing.**
   - After washing, allow to dry thoroughly in a shaded place.

3. **Replace the Air Filter and close the Intake Grille.**
   - Align the sides of the Air Filter with the panel, and push in fully, making sure the two lower tabs are returned properly to their holes in the panel.

   ![Hooks (two places)](image)

   ![Close the Intake Grille.](image)

   (For purposes of example, the illustration shows the unit without Intake Grille installed.)

---

### When using the optional Air Cleaning Filter

- Dust can be cleaned from the Air Filter either with a vacuum cleaner, or by washing the filter in a solution of mild detergent and warm water. If you wash the filter, be sure to allow it to dry thoroughly in a shady place before reinstalling.
- If dirt is allowed to accumulate on the Air Filter, air flow will be reduced, lowering operating efficiency and increasing noise.
- During periods of normal use, the Air Filters should be cleaned every two weeks.

- When used for extended periods, the unit may accumulate dirt inside, reducing its performance. We recommend that the unit be inspected regularly, in addition to your own cleaning and care. For more information, consult authorized service personnel.
- When cleaning the unit’s body, do not use water hotter than 40°C, harsh abrasive cleansers, or volatile agents like benzene or thinner.
- Do not expose the unit body to liquid insecticides or hairsprays.
- When shutting down the unit for one month or more, first allow the fan mode to operate continuously for about onehalf day to allow internal parts to dry thoroughly.
If the unit is stopped and then immediately started again, the compressor will not operate for about 3 minutes, in order to prevent fuse blowouts.

Whenever the Power is disconnected and then reconnected to a power outlet, the protection circuit will operate for about 3 minutes, preventing unit operation during that period.

During operation and immediately after stopping the unit, the sound of water flowing in the air conditioner’s piping may be heard. Also, noise may be particularly noticeable for about 2 to 3 minutes after starting operation (sound of coolant flowing). During operation, a slight squeaking sound may be heard. This is the result of minute expansion and contraction of the front cover due to temperature changes.

During Heating operation, a sizzling sound may be heard occasional. This sound is produced by the Automatic Defrosting operation.

Some smell may be emitted from the indoor unit. This smell is the result of room smells (furniture, tobacco, etc.) which have been taken into the air conditioner.

During Cooling or Dry operation, a thin mist may be seen emitted from the indoor unit. This results from the sudden Cooling of room air by the air emitted from the air conditioner, resulting in condensation and misting.

During Heating operation, the outdoor unit’s fan may stop, and steam may be seen rising from the unit. This is due to Automatic Defrosting operation.

During Heating operation, water may be produced from the outdoor unit due to Automatic Defrosting operation.

When there is frost on the outdoor unit when heating operation is stopped, defrosting will be performed automatically. At this time, OPERATION Indicator Lamp will flash, and operation will stop after the outdoor unit has run for several minutes.

### TROUBLESHOOTING

**WARNING!**

In the event of a malfunction (burning smell, etc.), immediately stop operation, disconnect the Power and consult authorized service personnel. Merely turning off the unit’s power switch will not completely disconnect the unit from the power source. Always be sure to disconnect the Power or turn off your circuit breaker to ensure that power is completely off.

Before requesting service, perform the following checks:

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Problem</th>
<th>See Page</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>NORMAL FUNCTIONS</strong></td>
<td>Doesn’t operate immediately: ● If the unit is stopped and then immediately started again, the compressor will not operate for about 3 minutes, in order to prevent fuse blowouts. ● Whenever the Power is disconnected and then reconnected to a power outlet, the protection circuit will operate for about 3 minutes, preventing unit operation during that period.</td>
<td></td>
</tr>
<tr>
<td>Noise is heard: ● During operation and immediately after stopping the unit, the sound of water flowing in the air conditioner’s piping may be heard. Also, noise may be particularly noticeable for about 2 to 3 minutes after starting operation (sound of coolant flowing). ● During operation, a slight squeaking sound may be heard. This is the result of minute expansion and contraction of the front cover due to temperature changes. ● During Heating operation, a sizzling sound may be heard occasional. This sound is produced by the Automatic Defrosting operation.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Smells: ● Some smell may be emitted from the indoor unit. This smell is the result of room smells (furniture, tobacco, etc.) which have been taken into the air conditioner.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Mist or steam are emitted: ● During Cooling or Dry operation, a thin mist may be seen emitted from the indoor unit. This results from the sudden Cooling of room air by the air emitted from the air conditioner, resulting in condensation and misting. ● During Heating operation, the outdoor unit’s fan may stop, and steam may be seen rising from the unit. This is due to Automatic Defrosting operation.</td>
<td>17</td>
<td></td>
</tr>
<tr>
<td>Airflow is weak or stops: ● When Heating operation is started, fan speed is temporarily very low, to allow internal parts to warm up. ● During Heating operation, the unit will temporarily stop operation (between 7 and 15 minutes) as the Automatic Defrosting mode operates. During Automatic Defrosting operation, the OPERATION Indicator Lamp will flash. ● The fan may operate at very low speed during Dry operation or when the unit is monitoring the room’s temperature. ● During SUPER QUIET operation, the fan will operate at very low speed. ● In the monitor AUTO operation, the fan will operate at very low speed.</td>
<td>7</td>
<td></td>
</tr>
<tr>
<td>Water is produced from the outdoor unit: ● During Heating operation, water may be produced from the outdoor unit due to Automatic Defrosting operation.</td>
<td>7</td>
<td></td>
</tr>
<tr>
<td>The outdoor unit does not stop even when heating operation is stopped: ● When there is frost on the outdoor unit when heating operation is stopped, defrosting will be performed automatically. At this time, OPERATION Indicator Lamp will flash, and operation will stop after the outdoor unit has run for several minutes.</td>

TROUBLESHOOTING

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Items to Check</th>
<th>See Page</th>
</tr>
</thead>
</table>
| Doesn’t operate at all: | • Has there been a power failure?  
• Has a fuse blown out, or a circuit breaker been tripped? |  
• Is the POWER switch set to the OFF position?  
• Is the timer operating? | 6 |
| Poor Cooling (or Heating) performance: | • Is the air filter dirty?  
• Are the air conditioner’s intake grille or outlet port blocked?  
• Did you adjust the room temperature settings (thermostat) correctly?  
• Is there a window or door open?  
• In the case of Cooling operation, is a window allowing bright sunlight to enter? (Close the curtains.)  
• In the case of Cooling operation, are there heating apparatus and computers inside the room, or are there too many people in the room? | 9 - 10 |
| The unit operates differently from the remote control unit’s setting: | • Is the unit set for SUPER QUIET operation? | 7 |
| • Are the Remote Control Unit’s batteries dead?  
• Are the Remote Control Unit’s batteries loaded properly? | 6 |

WARNING! If the problem persists after performing these checks, or if you notice burning smells, or the TIMER Indicator Lamp (Fig. 3, (6) flashes, immediately stop operation, disconnect the Power and consult authorized service personnel.

OPERATING TIPS

Operation and Performance

Heating Performance

• This air conditioner operates on the heat-pump principle, absorbing heat from outdoor air and transferring that heat indoors. As a result, the operating performance is reduced as outdoor air temperature drops. If you feel that insufficient heating performance is being produced, we recommend you use this air conditioner in conjunction with another kind of heating appliance.

• Heat-pump air conditioners heat your entire room by recirculating air throughout the room, with the result that some time may be required after first starting the air conditioner until the room is heated.

Microcomputer-controlled Automatic Defrosting

• When using the Heating mode under conditions of low outdoor air temperature high humidity, frost may form on the outdoor unit, resulting in reduced operating performance.

In order to prevent this kind of reduced performance, this unit is equipped with a Microcomputer-controlled Automatic Defrosting function. If frost forms, the air conditioner will temporarily stop, and the defrosting circuit will operate briefly (for about 7-15 minutes). During Automatic Defrosting operation, the OPERATION Indicator Lamp (red) will flash.

In Event of Power Interruption

Auto Restart

• The air conditioner power has been interrupted by a power failure. The air conditioner will then restart automatically in its previous mode when the power is restored.

• Operated by settings before the power failure. Then, the Air Flow Direction Louvers will automatically change to their standard direction.

• If a power failure occurs during TIMER operation, the timer will be reset and the unit will begin (or stop) operation at the new time setting. In the event that this kind of timer fault occurs, the TIMER Indicator Lamp (green) will flash (see page 5).

• Use of other electrical appliances (electric shaver, etc.) or nearby use of a wireless radio transmitter may cause the air conditioner to malfunction. In this event, temporarily disconnect the Power, reconnect it, and then use the Remote Control Unit to resume operation.

DB : Dry Bulb Temperature
WB : Wet Bulb Temperature

- If the air conditioner is used under higher temperature conditions than those listed, the built-in protection circuit may operate to prevent internal circuit damage. Also, during Cooling and Dry modes, if the unit is used under conditions of lower temperature than those listed above, the heat-exchanger may freeze, leading to water leakage and other damage.
- Do not use this unit for any purposes other than the Cooling, Heating, and Dehumidifying, and air-circulation of rooms in ordinary dwellings.
