SAFETY PRECAUTIONS

To prevent personal injury, or property damage, read this section carefully before you use this product, and be sure to comply with the following safety precautions. Incorrect operation due to failure to follow the instructions may cause harm or damage, the seriousness of which is classified as follows:

**WARNING**
This mark warns of death or serious injury.

**CAUTION**
This mark warns of injury or damage to property.

This mark denotes an action that is PROHIBITED.

This mark denotes an action that is COMPULSORY.

---

**WARNING**

- This product contains no user-serviceable parts. Always consult authorized service personnel for repair, installation, and relocation of this product. Improper installation or handling will cause leakage, electric shock, or fire.
- In the event of a malfunction such as burning smell, immediately stop operation of the air conditioner, and disconnect all the power supply by turning off the electrical breaker or disconnecting the power plug. Then consult authorized service personnel.
- Take care not to damage the power supply cable. If it is damaged, it should only be replaced by authorized service personnel.
- In the event of refrigerant leakage, be sure to keep away from fire or any flammables, and consult authorized service personnel.
- In the event of a thunder storm or any prior sign of a lightning strike, turn off the air conditioner via the remote controller, and refrain from touching the product or the power source to prevent any electrical hazards.
- This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance.

---

**CAUTION**

- Do not start or stop the operation of this product by turning on or off the circuit breaker.
- Do not use flammable gases near this product.
- Do not expose yourself directly to the cooling airflow for many hours.
- Do not insert your fingers or any other objects into the outlet port or inlet port.
- Do not operate with wet hands.
- Provide occasional ventilation during use.
- Always operate this product with air filters installed.
- Ensure that any electronic equipment is at least 40 in (1 m) away from either the indoor unit or outdoor unit.
- Disconnect all the power supply when you are not using this product for extended periods.
- After a long period of use, ensure to get the mounting of the indoor unit checked to prevent this product from falling down.
- The airflow direction and the room temperature should be carefully considered when you use this product in a room with infants, children, elderly or sick persons.
- Do not direct the airflow at fireplaces or heating apparatus.
- Do not block or cover the inlet port and the outlet port.
- Do not apply any heavy pressure to radiator fins.
- Do not climb on, place objects on, or hang objects from this product.
- Do not place any other electrical products or household belongings under this product.
- Dripping condensation from this product might get them wet, and may cause damage or malfunction of your property.
- Do not expose this product directly to water.
- Do not use this product for preservation of food, plants, animals, precision equipment, art work, or other objects. This may cause quality deterioration of those items.
- Do not expose animals or plants to the direct airflow.
- Do not drink the drainage from the air conditioner.
- Do not pull the power supply cable.
- Do not touch the aluminum fins of heat exchanger built-in this product to avoid personal injury when you maintain the unit.
- Do not stand on unstable steps when operating or cleaning this product. It may overturn and can cause injury.
Cleaning the air filter

1. Push the intake grille push buttons (two places) and open the intake grille.

2. Pull out the air filter from the intake grille.

3. Clean the air filter. Remove the dust from the air filter by vacuuming or washing it. After washing, allow the air filter to dry thoroughly in an area protected from sunlight.
   - Dust can be cleaned from the air filter either with a vacuum cleaner, or by washing the air filter in a solution of mild detergent and warm water. If you wash the air filter, be sure to allow it to dry thoroughly in a shady place before reinstalling.
   - If dirt is allowed to accumulate on the air filter, airflow will be reduced, lowering operating efficiency and increasing noise.

4. Re-attach the air filter to the intake grille.
   1. Replace the air filter into its holder.
   2. Make sure that the air filter makes contact with the filter stopper when it is replaced into its holder.

5. Close the intake grille.

NOTES

Filter sign
Select appropriate intervals for displaying the filter sign on the indoor unit according to the estimated amount of dust in the air of the room.
Please consult authorized service personnel when using this function.
For detailed instructions on how to operate, please refer to the Operating manual of the remote controller.
OPERATING TIPS

Instructions relating to heating (*) are applicable only to Heating and Cooling model (Reverse Cycle).

Heating performance*

• This air conditioner operates on the heat-pump principle, absorbing heat from outdoor air and transferring that heat indoors. As a result, the operating performance is reduced as outdoor air temperature drops. Also, please consult with your installation technician to ensure the unit is correctly sized for the room space required.

• Heat-pump air conditioners heat your entire room by recirculating air throughout the room, with the result that some time may be required after first starting the air conditioner until the room is heated.

When indoor and outdoor temperatures are high*

When both indoor and outdoor temperatures are high during use of the Heating mode, the outdoor unit’s fan may stop at times.

Microcomputer-controlled automatic defrosting*

• When using the Heating mode under conditions of low outdoor temperature and high humidity, frost may form on the outdoor unit, reducing the operating performance. In order to prevent this reduced performance, this product is equipped with a microcomputer-controlled automatic defrosting function. During the defrost cycle, the indoor fan will shut down, and the defrost mode will be indicated. It will take maximum of 15 minutes before the air conditioner starts up again.

• After Heating operation stops, if frost forms on the outdoor unit, the unit will start Automatic defrosting operation. At this time, the outdoor unit will automatically stop after operating for a few minutes.

Flow direction setting

Vertical air direction adjustment

Airflow direction setting: 1, 2, 3, 4: During cooling/heating/dry mode

• The vertical airflow direction is set automatically as shown, in accordance with the type of operation selected.

  During cooling/dry mode: Horizontal flow 2
  During heating mode*: Horizontal flow 2
  Downward flow 3 (26 type or smaller capacity model)
  4 (42 type or larger capacity model)

• During AUTO mode operation, for the first minute after beginning operation, airflow will be horizontal 2; the air direction cannot be adjusted during this period. Even if the flow direction is set, it may operate at a different position at the start of heating operation, during defrost, or when AUTO(auto changeover) is selected.

NOTES

• Attempting to move up/down air direction flaps manually could result in improper operation; in this case, stop operation and restart. The louvers should begin to operate properly again.

• When used in a room with infants, children, elderly or sick persons, the air direction and room temperature should be considered carefully when making settings.

Horizontal air direction adjustment

The function cannot be used.

Swing operation

<table>
<thead>
<tr>
<th>The type of operation</th>
<th>Range of swing</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cooling/Heating/Dry/Fan</td>
<td>1 to 4</td>
</tr>
</tbody>
</table>

The swing operation may stop temporarily when the air conditioner’s fan is not operating, or when operating at very low speeds.

Hot start*

The indoor unit prevents cold drafts when Heating operation begins. The indoor unit fan will not operate or it will operate at a very low speed until the heat exchanger reaches the set temperature.

Low ambient cooling

When the outdoor temperature drops, the outdoor unit’s fans may switch to low speed, or one of the fans may stop intermittently.

Mode operation

Auto

Cooling model:

• When AUTO (auto changeover) operation first selected, the fan will operate at very low speed for about a few minutes, during which time the indoor unit detects the room conditions and selects the proper mode. Room temperature is higher than the defined temperature in temperature setting → Cooling mode
  Room temperature is close to or lower than the defined temperature in temperature setting → Monitor operation

• When the indoor unit has adjusted your room’s temperature to near the temperature setting, it will begin monitor operation. In the monitor operation mode, the fan will operate at low speed. If the room temperature subsequently changes, the indoor unit will once again select the appropriate operation (cooling) to adjust the temperature to the value set in the temperature setting.

• If the mode automatically selected by the unit is not what you wish, select one of the mode operation (Cooling, Dry, Fan).
Heating and Cooling model (Reverse cycle):

- When AUTO (auto changeover) is selected, the air conditioner selects the appropriate operation mode (Cooling or Heating) according to your room's present temperature.
- When Auto mode is first selected, the fan will operate at low speed for about a few minutes, during which time the indoor unit detects the room conditions and selects the proper operation mode.

Room temperature is higher than the defined temperature in temperature setting → Cooling mode

Room temperature is close to the defined temperature in temperature setting → Determined by outdoor temperature

Room temperature is lower than the defined temperature in temperature setting → Heating mode

- When the air conditioner has adjusted your room's temperature to near the thermostat setting, it will begin monitor operation. In the monitor operation mode, the fan will operate at low speed. If the room temperature subsequently changes, the air conditioner will once again select the appropriate operation (Heating, Cooling) to adjust the temperature to the value set in the thermostat. If the mode automatically selected by the unit is not what you wish, select one of the mode operation (Heating, Cooling, Dry, Fan).

Heat*

- Use to warm your room.
- When Heating mode is selected, the air conditioner will operate at very low fan speed for about 3 to 5 minutes, after which it will switch to the selected fan setting. This period of time is provided to allow the indoor unit to warm up before beginning full operation.
- When the room temperature is very low, frost may form on the outdoor unit, and its performance may be reduced. In order to remove such frost, the unit will automatically enter the defrost cycle from time to time. During Automatic defrosting operation, the Heating operation will be interrupted.
- After the start of Heating operation, it takes sometime before the room gets warmer.

Cool

- Use to cool your room.

Dry

- Use for gently cooling while dehumidifying your room.
- You cannot heat the room during Dry mode.
- During Dry mode, the unit will operate at low speed; in order to adjust room humidity, the indoor unit's fan may stop from time to time. Also, the fan may operate at very low speed when adjusting room humidity.
- The fan speed cannot be changed manually when Dry mode has been selected.

Notes:

*During Heating mode:
Set the thermostat to a temperature setting that is higher than the current room temperature. The Heating mode will not operate if the thermostat is set lower than the actual room temperature.

During Cooling/Dry mode:
Set the thermostat to a temperature setting that is lower than the current room temperature. The Cooling and Dry modes will not operate if the thermostat is set higher than the actual room temperature (in Cooling mode, the fan alone will operate).

During Fan mode:
You cannot use the unit to heat or cool your room.

Fan

- Use to circulate the air throughout your room.

Controls the fan speed.

- AUTO
- HIGH
- MED
- LOW
- QUIET

When AUTO is selected, the fan speed is automatically adjusted according to the operation mode.

Heating*: The fan will operate at very low speed when the temperature of the air issued from the indoor unit is low.

Cooling: As the room temperature approaches that of the set temperature, the fan speed becomes slower.

Fan: The fan runs at medium fan speed.

In Event of Power Interruption

- Should the power supply to the air conditioner be interrupted by a power failure, the air conditioner will restart automatically in the previously selected mode once the power is restored.
- Use of other electrical appliances (electric shaver, etc.) or nearby use of a wireless radio transmitter may cause the air conditioner to malfunction. In this event, temporarily disconnect the power supply, reconnect it, and then use the remote controller to resume operation.

If only the following remote controller is connected, auto restart is not performed.

UTY-R*RY

Multiple remote controller (optional)

An additional remote controller can be added up to the maximum of two remote controllers. Either remote controller can control the air conditioner. However, the timer functions cannot be used at the secondary unit.

Group control

One remote controller can control up to 16 air conditioners. All of the air conditioners will be operated with the same settings.
**Notices**

* • During use of the Heating mode, the outdoor unit will occasionally commence the defrost operation for brief periods. During the defrosting operation, if the user sets the indoor unit for heating again, the defrosting mode will continue, and the Heating operation will begin after completion of defrosting, with the result that some time may be required before warm air is emitted.

* • During use of the Heating mode, the top of the indoor unit may become warm, but this is due to the fact that coolant is circulated through the indoor unit even when it is stopped; it is not a malfunction.

**TROUBLESHOOTING**

Instructions relating to heating (*) are applicable only to Heating and Cooling model (Reverse Cycle).

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
</table>

In the following events, immediately stop operation of the air conditioner, and disconnect all the power supply by turning off the electrical breaker or disconnecting the power plug. Then consult your dealer or authorized service personnel.

As long as the unit is connected to the power supply, it is not insulated from the power supply even if the unit is turned off.

- **Unit smells of something burning or emits smoke**
- **Water leaks from the unit.**

Before requesting service, perform the following checks:

**NORMAL FUNCTION**

**Does not operate immediately**

- If the unit is stopped and then immediately started again, the compressor will not operate for about 3 minutes, in order to prevent fuse blowouts.
- Whenever the electrical breaker is turned off then on again, the protection circuit will operate for about 3 minutes, preventing unit operation during that period.

**Noise is heard**

- During operation and immediately after stopping the unit, the sound of water flowing in the air conditioner’s piping may be heard. Also, noise may be particularly noticeable for about 2 to 3 minutes after starting operation (sound of coolant flowing).
- During operation, a slight squeaking sound may be heard. This is the result of minute expansion and contraction of the front cover due to temperature changes.
- During Heating operation, a sizzling sound may be heard occasionally. This sound is produced by the Automatic defrosting operation.

**Smells**

- Some smell may be emitted from the indoor unit. This smell is the result of room smells (furniture, tobacco, etc.) which have been taken into the air conditioner.

**Mist or steam are emitted**

- During Cooling or Dry operation, a thin mist may be seen emitted from the indoor unit. This results from the sudden cooling of room air by the air emitted from the air conditioner, resulting in condensation and misting.
- During Heating operation, the outdoor unit’s fan may stop, and steam may be seen rising from the unit. This is due to the Automatic defrosting operation.

**Humidity does not drop**

In the case of Dry operation.

- In some conditions of the room, the humidity does not drop.
- In order to lower the humidity, set a lower room temperature.

**Airflow is weak or stops**

- Indoor unit fan may start later than the outdoor unit fan, or it may stop when the outdoor unit fan is not operating. This is due to the Indoor unit fan control for energy saving operation.
- To disable this function, refer to the operation manual of the remote controller. (This function cannot be disabled in Auto fan mode.)
- When Heating operation is started, fan speed is temporarily very low, to allow internal parts to warm up.
- During Heating operation, if the room temperature rises above the thermostat setting, the outdoor unit will stop, and the indoor unit will operate at very low fan speed. If you wish to warm the room further, set the thermostat to a higher setting.
- During Heating operation, the unit will temporarily stop operation (maximum of 15 minutes) as the Automatic defrosting mode operates. During the Automatic defrosting operation, the defrost mode will be indicated. <<See operating manual of Remote controller.>>
- The fan may operate at very low speed during Dry operation or when the unit is monitoring the room’s temperature.
- During Quiet operation, the fan will operate at very low speed.
- In the monitor Auto operation, the fan will operate at very low speed.

**The flow direction does not change according to the setting or does not change at all**

- Even if the flow direction is set, it may operate temporarily at a different position at the start of heating operation, during defrost, or when AUTO (auto changeover) is selected.

**Water is produced from the outdoor unit**

- During Heating operation, water may be produced from the outdoor unit due to the Automatic defrosting operation.
**CHECK ONCE MORE**

<table>
<thead>
<tr>
<th><strong>Does not operate at all</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>• Has the circuit breaker been turned off?</td>
</tr>
<tr>
<td>• Has there been a power failure?</td>
</tr>
<tr>
<td>• Has a fuse blown out, or a circuit breaker been tripped?</td>
</tr>
<tr>
<td>• Is the timer operating?</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><em><em>Poor cooling (or heating</em>) performance</em>*</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Is the air filter dirty?</td>
</tr>
<tr>
<td>• Are the air conditioner’s intake grille or outlet port blocked?</td>
</tr>
<tr>
<td>• Did you adjust the room temperature settings (thermostat) correctly?</td>
</tr>
<tr>
<td>• Is there a window or door open?</td>
</tr>
<tr>
<td>• In the case of Cooling operation, is a window allowing bright sunlight to enter? (Close the curtains.)</td>
</tr>
</tbody>
</table>

| • In the case of Cooling operation, are there heating apparatus and computers inside the room, or are there too many people in the room? |
| • Is the unit set for Quiet operation?                |
| • Is the air conditioner in Economy mode?            |

If the problem persists after performing these checks, or if you notice burning smells, stop operation immediately, disconnect the power supply, and consult with authorized service personnel.
